ANIMAL UNITS OF LIVESTOCK FED ANNUALLY
1909-10 to 1952-53

This report brings to date the data on animal units reported in "Animal Units of Livestock Fed Annually, 1919-20 to 1948-49" (F.M. 64 revised) issued by the Bureau of Agricultural Economics in October 1949. It includes a preliminary estimate by States for the 1952-53 feeding year. These preliminary estimates are based on the numbers of livestock on farms January 1, 1953, on the pig crop report of December 1952, on the report of cattle on feed issued in January 1953 and on the report of intentions to raise turkeys dated January 23, 1953. The animal units for chickens to be raised in 1953 were obtained by multiplying the 1952 figures for each State by 105 percent. The number of broilers to be raised in 1953 was also assumed to be 105 percent of the number raised in 1952.

Three sets of animal units are presented in this report (1) grain-consuming livestock, (2) roughage-consuming livestock, and (3) grain-and-roughage-consuming livestock. Animal units of grain-consuming livestock are intended to show the number of all kinds of livestock combined that consume concentrated feeds of all kinds, including grain and byproduct feeds but excluding corn in silage. Animal units of roughage-consuming livestock are intended to show the number of all kinds of livestock combined that consume hay, silage, stover, straw, pasture, range forage, and other roughages. Animal units of grain-and-roughage-consuming livestock are intended to show the number of all kinds of livestock combined that consume all feed, including concentrates, hay, pasture, and other roughage.

Animal units were constructed so that they represented about the same quantity of feed in one part of the country as in another in 1940-45. An "average" milk cow in the United States is used as the base animal unit in this study. An average milk cow in New York consumes more feed than does the average cow in the United States and therefore is more than one animal unit, but in several other States the average milk cow is less than one unit. The tables showing animal units by classes of livestock by regions shown in F.M. 64 are omitted here. The method of computation and factors used in each State are given in F.M. 64.

Table 1.-- Animal units of principal livestock on farms in the United States, 1909 to 1952 1/

1/ Does not include minor livestock on farms or livestock in cities. Animal units of the different kinds of livestock from 1909 to 1918 were calculated by relating the average number of specified kinds of livestock on farms in the United States January 1, 1920 to 1924 to the animal units of the particular class of livestock for the five years. The factor thus obtained was applied to the number of that particular kind of livestock for each year from 1910 to 1919 to obtain the animal units. Animal units for the six principal kinds of livestock were added to give the total shown in the table. Animal units are not available by States before 1919.

2/ Preliminary.
